GE23131-Programming Using C- 2024 Status Finished Started Monday, 23 December
2024, 5:33 PM Completed Saturday, 23 November 2024, 1:14 PM Duration 30 days 4 hours Question 1 Correct
Marked out of 3.00 Flag question Some data sets specify dates using the year and day of year rather than the year, month, and day of month. The day of year (DOY) is the sequential day number starting with day 1 on January 1st. There are two calendars - one for normal years with 365 days, and one for leap years
with 366 days. Leap years are divisible by 4. Centuries, like 1900, are not leap years unless they are divisible by 400. So, 2000 was a leap year. To find the day of year number for a standard date, scan down the Jan column to find the day of month, then scan across to the appropriate month column and read the day of year number. Reverse the process to find the standard date for a given day of year. Write a program to print the Day of Year of a
given date, month and year. Sample Input 1 18 6 2020 Sample Output 1 170
Answer: (penalty regime: 0 %) 1 #include <stdio.h> 2 int main() 3 **</stdio.h>
<pre>4 int d,m,y,dob; 5 scanf("%d\n %d\n %d\n",&d,&m) 6 if(y%4==0) 7</pre>
Input Expected Got 18 170 170 ✓ 6 2020 Passed all tests! ✓
Question 2 Correct Marked out of 5.00
Suppandi is trying to take part in the local village math quiz. In the first round, he is asked about shapes and areas. Suppandi, is confused, he was never any good at math. And also, he is bad at remembering the names of shapes. Instead, you will be helping him calculate the area of shapes. • When he says rectangle he is actually referring to a square.
referring to a square. When he says square, he is actually referring to a triangle. When he says triangle he is referring to a rectangle And when he is confused, he just says something random. At this point, all you can do is say 0. Help Suppandi by printing the correct answer in an integer.
 Name of shape (always in upper case R à Rectangle, S à Square, T à Triangle) Length of 1 side Length of other side Note: In case of triangle, you can consider the sides as height and length of base Output Format
 Print the area of the shape. Sample Input 1 T 10 20 Sample Output 1
Sample Input 2 S 30 40 Sample Output 2
Sample Input 3 R 10 10
Sample Output 3 100 Sample Input 4 G 8 8
Sample Output 4 O Sample Input C 9 10 Sample Output 4
 Explanation: First is output of area of rectangle Then, output of area of triangle Then output of area square Finally, something random, so we print 0
Answer: (penalty regime: 0 %) #include <stdio.h> 2</stdio.h>
23 3 return 0; 25 26 27 28
10 20 S 30 40 B 0 0
2 11 R 300 300 10 30 S 40 1000 1000 1000 1000
Passed all tests! ✓
Correct Marked out of 7.00 Flag question Superman is planning a journey to his home planet. It is very important for him to know
which day he arrives there. They don't follow the 7-day week like us. Instead, they follow a 10-day week with the following days: Day Number Name of Day 1 Sunday 2 Monday 3 Tuesday 4 Wednesday 5 Thursday 6 Friday 7 Saturday 8 Kryptonday 9 Coluday 10 Daxamday Here are the rules of the calendar: • The calendar starts with Sunday always. • It has only 296 days. After the 296th day, it goes back to Sunday. You begin your journey on a Sunday and will reach after n. You have to tell on which day you will arrive when you reach there. Input format: • Contain a number n (0 < n) Output format: Print the name of the day
you are arriving on Example Input 7 Example Output Kryptonday Example Input 1 Example Output Monday Answer: (penalty regime: 0 %) 1 #include <stdio.h> 2 int main()</stdio.h>
<pre> 3</pre>
<pre>21 * 22</pre>
Input Expected Got
