| Input Format: The first line will contain the N numbers separated by one space. Boundary Conditions: |
| Boundary Conditions: |
| |
| The value of the numbers can be from -99999999 to 99999999 |
| The count of numbers where the numbers are odd numbers. |
| Example Input / Output 1: Input: 5 10 15 20 25 30 35 40 45 50 |
| Output: |
| Explanation: The numbers meeting the criteria are 5, 15, 25, 35, 45. |
| Answer: (penalty regime: 0 %) 1 #include <stdio.h> 2 int main()</stdio.h> |
| <pre>3</pre> |
| 11 } 12 printf("%d",x); 13 return 0; 14 } |
| |
| Input 5 10 15 20 25 30 35 40 45 50 5 Passed all tests! |
| Question 2 Correct Marked out of 5.00 Flag question |
| Given a number N, return true if and only if it is a <i>confusing number</i> , which satisfies the following condition: |
| We can rotate digits by 180 degrees to form new digits. When 0, 1, 6, 8, 9 are rotated 180 degrees, they become 0, 1, 9, 8, 6 respectively. When 2, 3, 4, 5 and 7 are rotated 180 degrees, they become invalid. |
| A confusing number is a number that when rotated 180 degrees becomes a different number with each digit valid. Example 1: |
| 6 -> 9 Input: 6 Output: true Explanation: We get 9 after rotating 6, 9 is a valid |
| number and 9!=6. Example 2: 89 -> 68 Input: 89 |
| Output: true Explanation: We get 68 after rotating 89, 86 is a valid number and 86!=89. |
| Example 3: 11 -> 11 Input: 11 Output: false Explanation: |
| Explanation: We get 11 after rotating 11, 11 is a valid number but the value remains the same, thus 11 is not a confusing number. |
| Note: 1. 0 <= N <= 10^9 2. After the rotation we can ignore leading zeros, for example if after rotation we have 0008 then this number is |
| <pre>considered as just 8. Answer: (penalty regime: 0 %) 1 #include<stdio.h> 2 int main()</stdio.h></pre> |
| <pre>3 v { 4 int n,x,y=1; 5 scanf("%d",&n); 6 while(n!=0&&y==1) 7 8 v 9</pre> |
| <pre> 10 11 v 11 v 12 13 14 15 16 v 17</pre> if (x==2 x==3 x==4 |
| 17 18 19 20 v 21 22 23 3 4 24 |
| Input Expected Got |

| Question 3 Correct |
| Marked out of 7.00 Flag question A nutritionist is labeling all the best power |
| foods in the market. Every food item arranged in a single line, will have a value beginning from 1 and increasing by 1 for each, until all items have a value associated with them. An item's value is the same as the number of macronutrients it has. For |
| example, food item with value 1 has 1 macronutrient, food item with value 2 has 2 macronutrients, and incrementing in this fashion. |
| The nutritionist has to recommend the best combination to patients, i.e. maximum total of macronutrients. However, the nutritionis must avoid prescribing a particular sum of macronutrients (an 'unhealthy' number), and this sum is known. The nutritionist |
| chooses food items in the increasing order of their value. Compute the highest total of macronutrients that can be prescribed to a patient, without the sum matching the give 'unhealthy' number. |
| Here's an illustration: Given 4 food items (hence value: 1,2,3 and 4), and the unhealthy sum being 6 macronutrients, on choosing items 1, 2, 3 - |
| the sum is 6, which matches the 'unhealthy sum. Hence, one of the three needs to be skipped. Thus, the best combination is from among: $2 + 3 + 4 = 9$ $1 + 3 + 4 = 8$ |
| 1 + 2 + 4 = 7 Since $2 + 3 + 4 = 9$, allows for maximum number of macronutrients, 9 is the right answer. |
| Complete the code in the editor below. It must return an integer that represents the maximum total of macronutrients, modulo $1000000007 (10^9 + 7)$. |
| It has the following: n: an integer that denotes the number of food items k: an integer that denotes the unhealthy |
| R: an integer that denotes the unnealthy number Constraints $1 \le n \le 2 \times 10^9$ $1 \le k \le 4 \times 10^{15}$ |
| Input Format For Custom Testing The first line contains an integer, <i>n</i> , that |
| denotes the number of food items. The second line contains an integer, k , that denotes the unhealthy number. |
| Sample Input 0 |
| 2 2 |
| 2 |
| 2 2 Sample Output 0 |
| 2 2 Sample Output 0 Explanation 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. |
| 2 2 Sample Output O Explanation O The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 2 1 |
| 2 2 Sample Output 0 Explanation 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 |
| Sample Output 0 Explanation 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 Sample Output 1 |
| 2 Sample Output 0 Explanation 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 Sample Output 1 Explanation 1 1. Cannot use item 1 because $k = 1$ and $sum = k$ has to be avoided at any time. 2. Hence, max total is achieved by $sum = 0 + 2 = 2$. Sample Case 2 |
| 2 2 Sample Output 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 2 1 Sample Output 1 2 Explanation 1 1. Cannot use item 1 because $k = 1$ and $sum = k$ has to be avoided at any time. 2. Hence, max total is achieved by $sum = 0 + 2 = 2$. |
| Sample Output 0 Sample Output 0 The following sequence of n = 2 food items 1. Item 1 has 1 macronutrients. 1. Item 1 has 1 macronutrients. 2. 1 + 2 = 3; observe that this is the max total, and having avoided having exactly k = 2 macronutrients. Sample Input 1 Sample Output 1 Explanation 1 1. Cannot use item 1 because k = 1 and sum ≡ k has to be avoided at any time. 2. Hence, max total is achieved by sum = 0 + 2 = 2. Sample Case 2 Sample Input For Custom Testing Sample Input 2 3 3 Sample Output 2 |
| Sample Output 0 Explanation 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 Sample Output 1 Explanation 1 1. Cannot use item 1 because $k = 1$ and $sum = k$ has to be avoided at any time. 2. Hence, max total is achieved by $sum = 0 + 2 = 2$. Sample Case 2 Sample Input For Custom Testing Sample Input 2 3 3 Sample Output 2 5 Explanation 2 |
| Sample Output 0 Explanation 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 Sample Output 1 Explanation 1 1. Cannot use item 1 because $k = 1$ and $sum = k$ has to be avoided at any time. 2. Hence, max total is achieved by $sum = 0$ or $k = 2$. Sample Case 2 Sample Input For Custom Testing Sample Input 2 3 3 Sample Output 2 5 Explanation 2 |
| Sample Output 0 Sample Output 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 2 Explanation 1 1. Cannot use item 1 because $k = 1$ and $sum = k$ has to be avoided at any time. 2. Hence, max total is achieved by $sum = 1$ of $k = 1$ and $k = $ |
| Explanation 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 2 Explanation 1 1. Cannot use item 1 because $k = 1$ and $sum = k$ has to be avoided at any time. 2. Hence, max total is achieved by $sum = 0 + 2 = 2$. Sample Case 2 Sample Input For Custom Testing Sample Input 2 3 3 Sample Output 2 5 Explanation 2 $2 + 3 = 5$, is the best case for maximum nutrients. Answer: (penalty regime: 0 %) 1 #include <stdio.h> 1 ong long int n,t,i,nutscanfill % long long int n,t,i,nutscanfi</stdio.h> |
| Explanation 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$, observe that this is the max total, and having avoided having exactly $k = 2$ macronutrients. Sample Input 1 2 Explanation 1 1. Cannot use item 1 because $k = 1$ and $sum = k$ has to be avoided at any time. 2. Hence, max total is achieved by $sum = 0$ to $k = 1$ and $sum = 1$ to $sum = 1$ |
| Explanation 0 The following sequence of $n = 2$ food items 1. Item 1 has 1 macronutrients. 2. $1 + 2 = 3$; observe that this is the max total, and having avoided having exactly $k : 2$ macronutrients. Sample Input 1 2 Explanation 1 1. Cannot use item 1 because $k = 1$ and $sum = k$ has to be avoided at any time. 2. Hence, max total is achieved by $sum : 0 + 2 = 2$. Sample Case 2 Sample Input For Custom Testing Sample Input 2 3 3 Sample Output 2 5 Explanation 2 $2 + 3 = 5$, is the best case for maximum nutrients. Answer: (penalty regime: 0 %) 1 #include <stdio.h> 1 and in() 3 for (i=1;i<=n;i++) 4 for (i=1;i<=n;i++) 7 for (i=1;i<=n;i++) 1 finut=nut+i; 1 if (nut==t) 1 if (nut=nut+i) 2 if (nut=nut+i) 3 if (nut=nut+i) 3 if (nut=nut+i) 4 if (nut=nut+i) 5 if (nut=nut+i) 6 if (nut=nut+i) 7 if (nut=nut+i) 8 if (nut=nut+i) 8 if (nut=nut+i) 9 if (nut=nut+i) 1 if</stdio.h> |
| Sample Output 0 The following sequence of n = 2 food items 1. Item 1 has 1 macronutrients. 2. 1 + 2 = 3; observe that this is the max total, and having avoided having exactly k = 2 macronutrients. Sample Input 1 2 Explanation 1 1. Cannot use item 1 because k = 7 and sum = k has to be avoided at any time. 2. Hence, max total is achieved by sum. 0 + 2 = 2. Sample Case 2 Sample Input For Custom Testing Sample Input 2 3 3 Sample Output 2 5 Explanation 2 2 + 3 = 5, is the best case for maximum nutrients. Answer: (penalty regime: 0 %) 1 #include-stdio.h> 2 int main() 3 |
| Sample Output 0 Sample Output 0 The following sequence of n = 2 food items 1. Item 1 has 1 macronutrients. 2. 1 + 2 = 3; observe that this is the max total, and having avoided having exactly k = 2 macronutrients. Sample Input 1 Explanation 1 1. Cannot use item 1 because k = 1 and sum = k has to be avoided at any time. 2. Hence, max total is achieved by sum: 0 + 2 = 2. Sample Case 2 Sample Input For Custom Testing Sample Input 2 3 3 Sample Output 2 5 Explanation 2 2 + 3 = 5, is the best case for maximum nutrients. Answer: (penalty regime: 0 %) 1 |
